Key Insights & Recommendations

💡 Key Insights & Recommendations

Data-driven findings and actionable recommendations for Bright Coffee sales performance

🏆 Top Performers

- **Dark chocolate Lg** leads with **R 388,611** in revenue across **4,668** units and **3,029** transactions — the highest revenue product overall.
- **Latte Rg** is a close second at **R 353,577** with **4,497** units sold, showing strong demand for espresso-based drinks.
- **Dark chocolate Rg** and **Spicy Eye Opener Chai Lg** each exceed **R 250K**, indicating that **Drinking Chocolate** and **Tea** categories are significant revenue drivers alongside Coffee.

⚠️ Underperformers

- **Oatmeal Scone** generates only **R 101,010** from **1,820** units — the lowest among top products, suggesting Bakery items may need promotional support or menu repositioning.
- **Columbian Medium Roast Sm** and **Our Old Time Diner Blend Sm** trail other Coffee products despite decent unit volumes, pointing to pricing or demand sensitivity in the Sm size segment.

📊 Category Revenue Distribution

- **Coffee** remains the dominant category but **Drinking Chocolate** and **Tea** are strong secondary contributors.
- The **Bakery** category trails significantly — consider cross-promotions with high-volume coffee beverages.
- Product type diversity within Coffee (Latte, Ethiopia, Columbian, Diner Blend) suggests a broad customer base with varied preferences.

📌 Recommendations

1. **Promote Bakery pairings** — bundle scones with top-selling coffees to lift underperforming Bakery revenue.
2. **Expand Drinking Chocolate offerings** — its strong performance warrants new flavours or size options.
3. **Review Sm-size pricing** — smaller coffee sizes underperform; test price adjustments or loyalty incentives.
4. **Stock optimisation** — ensure top revenue products (Dark chocolate Lg, Latte Rg) never face supply shortages.

🏪 Store Performance

- Revenue is distributed across all store locations, but the **Store KPI Summary** on the Store Performance page highlights meaningful differences in average order value and transaction volume.
- Stores with higher transaction counts but lower average order value may benefit from **upselling strategies**.

⏰ Sales Timing

- **Day-of-week** and **hour-of-day** patterns (see Store Performance page) reveal peak and off-peak periods.
- Use these patterns to **optimise staffing** and run **targeted promotions during off-peak hours**.

🎯 Action Plan

1. Align staffing with peak day/hour patterns to reduce wait times and capture maximum demand.
2. Launch off-peak promotions (e.g., afternoon happy hour) to smooth revenue across the day.
3. Benchmark top-performing stores and replicate best practices at lower-performing locations.
4. Monitor ZAR revenue trends monthly to catch emerging product or category shifts early.
